

Module 2 Lab 1 — Python Warm-Up + First Push

Name: Roee Kadur

Course: CS 82A

GitHub Repository: <https://github.com/roee0910/cs82a-portfolio>

Module 2 Lab 1 — Python Warm-Up + First Push ****Name:**** Roee Kadur ****Course:**** CS 82A ****GitHub Repository:**** <https://github.com/roee0910/cs82a-portfolio> This notebook completes Steps 1–9 of Module 2 Lab 1.

Step 1: Wages with f-strings

Code:

```
name = "Roee"
hourly_wage = 20.0
hours = 32
weekly_pay = hourly_wage * hours

print(f"{name} earns {weekly_pay} per week")
```

Output:

Roee earns 640.0 per week

Step 2: Count the warm days

Code:

```
temps = [61, 65, 72, 58, 70, 74, 68]

warm_days = 0
for temp in temps:
    if temp > 65:
        warm_days = warm_days + 1

print(warm_days)
```

Output:

4

Step 3: Temperature converter

Code:

```
def to_celsius(f):
    return (f - 32) * 5 / 9

print(round(to_celsius(temps[0]), 1))
```

Output:

16.1

Step 4: A movie dictionary

Code:

```
movie = {
    "title": "The Dark Knight",
    "year": 2008,
    "rating": 9.0
}

for key, value in movie.items():
    print(key, ":", value)
```

Output:

title : The Dark Knight
year : 2008
rating : 9.0

Step 5: Load and inspect `chickwts.csv`

Code:

```
import pandas as pd

df = pd.read_csv("chickwts.csv", index_col=0)

df.head()
```

Output:

	weight	feed
1	179	horsebean
2	160	horsebean
3	136	horsebean
4	227	horsebean
5	217	horsebean

Code:

```
df.shape
```

Output:

```
(71, 2)
```

Code:

```
df.describe()
```

Output:

	weight
count	71.000000
mean	261.309859
std	78.073700
min	108.000000
25%	204.500000
50%	258.000000
75%	323.500000
max	423.000000

Step 6: Interpret `describe()` The average chick weight is about **261.3**, while the median is **258**, so a typical chick in this dataset weighs around 260. The standard deviation is about **78.1**, showing a fairly wide spread in weights, with values ranging from **108 to 423**. The large range suggests that the chicks vary substantially in size.

Step 7: GitHub repository Create a **PUBLIC** repository named `cs82a-portfolio`. README text: > Hi, I'm Roee Kadur. This repository is my portfolio for CS 82A, where I am learning Python and data science foundations. > >
Module 2: Python foundations

Step 8: Upload the notebook Upload this file to the `module2/` folder in the public repository:
`module2/module2\_lab.ipynb`

Step 9: Submit the URL **GitHub repository URL:** <https://github.com/roee0910/cs82a-portfolio> Submit
`module2\_lab.ipynb` and `module2\_lab.pdf` individually to Canvas.
